Audit trail

< 5 min

Time to first value

Built for finance, programs, sub-award, and compliance teams who spend their weeks reading PDFs, cross-checking spreadsheets, and verifying bank accounts by hand. DOCex does the document-heavy parts of the job in the time it takes to make coffee — and leaves an audit trail your auditor can't argue with.

Document-heavy operations cost real time.

A typical sub-award team receives 200+ partner applications per cycle. Each applicant submits 5–8 documents — registration certificate, financials, proposal, organisational profile, audit report. The team needs concrete answers across all of them:

- Is this org registered with the right authority?
- Have they managed donor funds before?
- Do they have an anti-fraud policy?
- What states or regions do they operate in?
- Has their audit been signed in the last 24 months?

Today, someone reads every document. By hand. The whole cycle takes **two weeks**. Compliance teams hit the same wall on the way out: every payment voucher gets checked rule by rule against a policy nobody has time to read end-to-end, and finance teams verify recipient bank accounts by thumb-typing them into a phone app and hoping.

WHY EXISTING TOOLS DON'T SOLVE IT

Generic AI chatbots don't know your policy or your workflow. **Grant-management platforms** charge \$30k/year for form-builders and never learned to read documents. **OCR tools** extract text but leave the actual work — turning that text into a verdict — to a human.

Three Co-Pilots. One audit trail. One price.

DOCex is not a chatbot you ask questions to. It's three named Co-Pilots, each one replacing the document-heavy parts of a specific role on your team. They share an engine, a Claude-written brief on every result, and an audit trail that survives later policy edits.

FOR SUB-AWARD & GRANTS TEAMS

Sub-award Co-Pilot

Screen hundreds of partner applications in an afternoon. Verify grantee bank accounts before disbursement. Review quarterly reports against the original proposal.

Two-week screening cycles compressed to an afternoon.

FOR EVENTS, TRAINING & PROGRAMS TEAMS

Programs Co-Pilot

Drop in your attendance log and payment list. The Co-Pilot matches names, applies per-diem rates, flags attendees who never made it onto the schedule, and verifies every bank account before finance touches the file.

Three hours of cross-checking becomes a three-minute review.

FOR COMPLIANCE & FINANCE TEAMS

Compliance Co-Pilot

Upload your procurement, travel, or donor policy once. The Co-Pilot turns it into an editable rulebook. Every voucher gets checked rule by rule, with citations from both the policy and the voucher — and a decision log that captures approvals, escalations, and signatures.

Defensible compliance, every time, with no extra paperwork.

The audit trail that doesn't drift.

Most AI tools win the demo and lose the audit. DOCex was built from the start to be defensible. Every compliance check captures a frozen snapshot of the rulebook that was active when the check ran. Edit the policy a year later — yesterday's audit doesn't quietly change underneath you.

What we capture on every check:

- **Rulebook snapshot** — Frozen at check-run time. Later edits create a new rulebook version.
- **Verdict per rule** — Pass / flag / block with the AI's reasoning and the source citations.
- **Document citations** — Every claim links back to the page + paragraph it came from.
- **Decision log** — Append-only timeline: notes, escalations, clarifications, approvals.
- **Signatures** — Drawn + typed signatures on approvals, escalations, and responses.
- **Approval chain** — Who reviewed, who escalated, who approved. Timestamped throughout.

The result: when your auditor asks "why was this voucher approved?", you don't dig through inboxes. You send them a URL.

Every account, all the capabilities.

No "premium" features hidden behind tier walls. Every DOCex account ships with the full Co-Pilot suite, the full audit trail, and every export your auditor will ever ask for. We scope volume per organisation as part of the pilot conversation.

DOCex Assistant brief on every result	✓
Append-only decision log + signatures	✓
Frozen rulebook snapshot per check	✓
Excel and PDF export of any result	✓
Citations on every claim, policy and document side	✓
Knowledge Hub library + library-wide chat	✓
Bank account verification (recipient match)	✓
All three Co-Pilots: Sub-award · Programs · Compliance	✓
Sample-data preview before bringing your own files	✓
Audit-ready archive — every check has a stable URL	✓

Volume, seats, and integration support are scoped together during the pilot — sized to your team and your document load.

The 30-day pilot.

Most prospects start with a paid 30-day pilot. The flow:

Week 0 · Demo

30-minute screen-share. We use sample data first, then your real (anonymised) docs for the last 10 minutes.

Week 1 · Setup

We load your real policy, set up your team accounts, and seed one real check together so you see end-to-end how it works.

Week 2 · Run

Your team runs real checks against real vouchers. The DOCex Assistant briefs every result. We sit in your Slack for fast fixes.

Week 3 · Tune

We adjust thresholds, rulebook phrasing, and integrations based on what you saw. Most pilots only need 1–2 tweaks.

Week 4 · Decide

You decide: convert to a monthly subscription, extend the pilot, or step away. No lock-in.

Ready to see it on your docs?

Reply to this email with a 15-minute window. We'll send a screen-share link and a sample-data preview you can click before the call.
